

PEG-900™

GRAPHITE COURSE

Lubricant

Oil & Gas Drilling Fluids / WBM

PEG-900™ Graphite Course is a natural graphite product with particle size ranges from 500 to 10 microns with an average size of about 165 microns. Unlike very fine graphite, coarse graphite provides a bed of lubricating particles particularly useful in hard rock formations and in deviated holes. **PEG Graphite Course** has less effect on mud rheology than fine graphite.
